Reasons for Allowance

1. Claims 1-7 and 16-28 allowed over the prior art of record. Claims 1, 2, 3, 20 and 29 are renumbered as 1-5, respectively, Claims 4-7 and 21 are renumbered as 6-10, respectively, Claims 16-19 and 22 are renumbered as 11-15, respectively, and Claims 23-28 are renumbered as 16-21 respectively.
2. The present invention is directed to a service processing system that provides a service of performing predetermined processes on document data inputted from an input device through cooperation among the processes over a server. Independent claims 1, 4 and 6 identifies the uniquely distinct features "a controller provided in the control device that determines whether an acquisition error indicating failure in acquiring the document data occurs and whether a decode error indicating failure in decoding the acquired document data occurs, and executes a recovery process to eliminate the acquisition error when the acquisition error occurs and the decode error when the decode error occurs; a rule management unit that dynamically creates and modifies rules relating to errors occurring in processing tasks for the predetermined series of processes on document data, the rules being dynamically created based upon capturing destinations, processing methods, and distribution destinations for the service processing system; and a recovery unit that performs recovery processing on the document data based upon the particular rule managed by the rule management unit, wherein, in the recovery process, the controller requests to resend a page of the

document data in which the acquisition error occurs and controls reexecution of a decoding process of a page of the document data in which the decode error occurs” and independent claims 23, 25 and 27 identifies the uniquely distinct features “a control unit which performs control such that when there is an error with respect to processing of the document data during execution of the series of the plurality of processes, the control unit executes the processes following the process in which there was the error by using a process different from the processes after the process in which there was the error and executes the processes with respect to portions of the document data other than a location in which there was the error, the control unit then re-executes the processing of the portion of the document data at the location in which the error occurred”. The closest prior art, Hertling et al (US 7,299,244) fails to anticipate or render the above underlined limitations obvious.
